PROFESSIONAL SUMMARY

Graduate Engineer Trainee with hands-on experience at Lenovo India in Microsoft Intune, focusing on Windows endpoint management, device enrollment, compliance monitoring, application deployment, and endpoint troubleshooting. Strong foundation in software development, REST APIs, SQL, and Python, with project experience in full-stack application development and machine learning. Familiar with data preprocessing, model training, and evaluation, and eager to contribute to software feature development, testing, and debugging.

TECHNICAL SKILLS

- Programming: Java, JavaScript, Python
- Software Development: Spring Boot, Spring MVC, Spring Data JPA, REST APIs, React
- Databases: MySQL, MongoDB, SQLite
- Tools: Git, GitHub, Maven, Postman
- AI/ML: NumPy, Pandas, Scikit-learn, PyTorch, Machine Learning, Model Evaluation
- Other Technologies: Microsoft Azure, Docker, Kubernetes, CI/CD

EXPERIENCE

Graduate Engineer Trainee

Jan 2026 - Jul 2026

Lenovo India Private Limited

- Developed a Java and Spring Boot-based login/logoff tracking feature for Hamara HR to calculate employee working hours and manage 9 AM–6 PM schedules with a 30-minute buffer.
- Worked with Microsoft Intune for Windows endpoint management, including device enrollment, configuration, compliance monitoring, application deployment, and endpoint troubleshooting.

Android Developer Intern

Feb 2025 – Sep 2025

Sasken Technologies Limited

- Engineered Android features using Java, XML, Android SDK, and reusable UI components, while developing a note-taking application with features such as CRUD operations, search, image attachments, and local data storage using SQLite
- Collaborated with development teams using Git, code reviews, and structured feature integration.

EDUCATION

Visvesvraya Technological University

2021-2025

B.E in Computer Science and Engineering

CGPA: 9/10

PROJECTS

1. Smart Electricity Demand Forecasting

- Developed an electricity demand forecasting pipeline using Python, NumPy, Pandas, Scikit-learn, and PyTorch, analyzing 130,000+ hourly KPTCL grid-load records with 7 engineered features and multiple ML/DL models

GitHub Repository: [Smart Electricity Project](#)

2. Employee Productivity & Worklog System

- Developed a full-stack Employee Productivity and Worklog System with 5 integrated modules, enabling employee login/logout tracking, work-hour calculations, task management, worklog recording, and weekly reporting in a centralized platform using Java, Spring Boot, MySQL, and React.
